

DCX TAPE UTILITY SOFTWARE

DCX (Data Conversion eXpress) is a comprehensive data conversion/transfer tool that lets you move data from tape to disk. This Mainframe to PC conversion tool gives users complete control over their data conversion requirements. EBCDIC to ASCII conversion is simple and fast and can be performed to meet user requirements and specifications. **DCX** allows conversion of the data on a block, record and field level basis. Numerically packed fields can be converted with ease as **DCX** intuitively identifies all fields and places conversion possibilities against them. This once complex task is now software interpreted and the conversion layout is completed and if needed can be edited by the user. Output this data into comma delimited fields. **DCX** identifies labelled or unlabeled tapes and data conversion is handled with ease and flexibility. TAR and CPIO data formats can also be translated from tape or disk. **DCX** is a simple to use conversion utility with many features and benefits.

DCX tape utility software works under the Windows OS 2000 / XP / 2003, 2007 and Windows7 (in compatibility mode). Support for almost all SCSI tape devices including 9-track, 3480/3490/3490E, 3590, 4mm, 8mm, DLT, SDLT, and LTO drives. Fibre devices are also supported including IBM 3592 J1A, E05, E06 drives and the Ultrium LTO2, LTO3 and LTO4 drives. If you have a data conversion requirement consider the **DCX** tape tool.

Features:

- EBCDIC to ASCII translation
- Read & Write labelled or unlabeled tapes
- Fixed or Variable formats
- IBM or ANSI Compatible
- Block, Record, and Field level conversion
- Read TAR\CPIO Tapes
- Display hex values to screen
- Scan tapes to determine size

Benefits:

- Easy to use, Intuitive
- GUI interface
- Works with SCSI and Fibre drives
- Work with Windows7 OS
- Easy Install and deployment
- User definable - Simple or Complex definitions
